DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-22, drawn to a magnetron, classified in class 219, subclass 606.
- II. Claims 23-28, drawn to a microwave oven, classified in class 219, subclass 678.
- III. Claims 29-38, drawn to a high frequency apparatus, classified in class 315, subclass 500.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because Group II the combination does not require the particulars of the attaching unit comprising rivets or bolts being made of non-magnetic or paramagnetic material. The subcombination (Group I) has separate utility such as particle accelerator or radar unit.

Inventions III and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP §

Art Unit: 2821

806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because Group III the combination does not require the particulars of the attaching unit comprising rivets or bolts being made of non-magnetic or paramagnetic material. The subcombination (Group I) has separate utility such as microwave oven or germ killing by high heat.

Inventions II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions Group II comprises a cooking cavity being capable of cooking food. On the other hand, Group III comprises a high frequency particle acceleration unit being capable of killing germ in air cleaning, accelerating particle and used as a radar unit.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

A shorten statutory period for response to this action is set to expire thirty days from the mailing date of this communication. Failure to respond within the period for response will cause the application to become abandoned.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim

Art Unit: 2821

remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
